WAC.3®
Wyssen Avalanche Control Center

Safety through **innovation**

All in one online platform
Operating Software Wyssen Avalanche Control Center WAC.3®

The latest software generation including new hardware for operating, monitoring and data storage of the well-proven Wyssen Avalanche Towers, detection systems and weather stations.

- Simple and intuitive web-based operating interface
- Operable from any web-enabled device (PC, Tablet, Notebook, Smartphone)
- Operation independent of location
- Multiple release from Avalanche Towers possible
- Simple visualization of all systems divided in groups of avalanche zones and functions as RACS, weather data, avalanche detection etc.
- Improved system availability thanks to constant monitoring of the systems status and operations all around the clock (24/7)
- Preventive automatic alarms in case of improper status of system components
- Automatic documentation and archiving of data e.g. decision making process, measures taken etc.
- Communication security is assured in case of mobile network failure thanks to the back-up connection via radio
- Extensive additional features (explosive documentation, avalanche documentation, weather station, communication tool, snow height measurement etc.)
